

The Problem

Routine work is routinely painful!

So... Why are basics not addressed?

Why Are Basics Not Addressed?

Not Sexy

- Vendors push tomorrow's technology (AI, ML, Cloud...etc)
- Forms and workflow largely solved
- Working on process is less fun than rolling out new tech

Lacking Standards

- Teams are doing their own thing
- Can't simply build process and go
- Tools are not geared to the problem.

Too Expensive

- Per-user license model is problematic
- Upgrades require significant effort
- Labor rates for highly specialized vendor-specific platform developers

The Solution

Modernize for Tomorrow's Needs

This Can Be Done!

Make It Sexy

- Helping every warfighter produces tangible benefits
- Fast feedback loops allows developers to see progress
- Leverage modern tools like APIs, UI kits, low-code tools

Create Standards

- Workflow-as-a-service program
- Provide reusable components to speed development
- Training programs build consistency

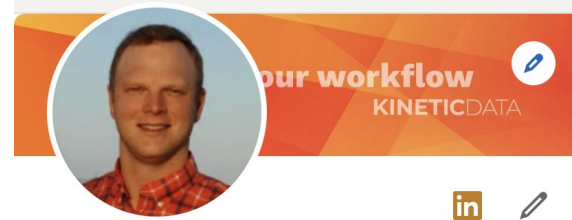

Reduce the Cost

- Consumption model for licensing
- Eliminate per user license fees
- Match the fit and financial model with the need
